

PROJECT AGREEMENT · PHASE 1 OF 4: FOUNDATION · FOR ANCHOR MILL GROUP

AMG ONE APP.

Getting your software cleaned up, organized, and ready to become one simple app. Five weeks. One fixed fee. A clear plan at the end.

Why we're doing this

Today AMG has two separate apps. One is the older staff back office, called the Portal. The other is the newer app that families see, called the OS. They have different web addresses, different logins, and different looks, and they don't share information.

Both apps have good pieces. Both are also cluttered with test entries, duplicate alerts, broken screens, and false alarms. You've told us you want the experience to be simple for the families you serve. This phase cleans the house and designs that simple version, so the full build starts from solid ground.

A. We take the keys

Week 1

We take over day-to-day care of both apps and the accounts they run on. Taking care of them is not owning them: AMG stays the owner of everything, and every account stays in AMG's name (section 7 spells this out). Nothing goes offline while we do this. You get a one-page list of every account and service the apps depend on, whose name each one is in, and who has access to it.

B. A clean house

Weeks 1–3

- **Test clutter removed.** Every test account, sample entry, and duplicate is cleared from the screens your team and families see.
- **The dashboard stops showing false red.** The copied-and-pasted alerts that make everything look like a crisis are cleared, and the cause is fixed.
- **Broken screens fixed.** This covers the empty task board, report emails that never send, duplicated message templates, the "tamper detected" warning, the dead help link, and the unfinished assessment list.
- **Email and text connections sorted.** Each one is either reconnected and working, or removed from the screen so nobody trips over it.

C. The alarms get quiet

Weeks 2–4

Right now the family's news feed flags hundreds of stories as urgent. Most have nothing to do with the family. One example: a sports-show host who shares the family's last name. We fix it so that only news about the family's actual people, places, and trips is marked urgent. Repeated copies of the same story are removed.

What you'll see: a family's alert list goes from hundreds of "HIGH" flags to a short list a person would actually read.

D. Documents kept safe

Week 2

Files uploaded to the family's document vault currently sit on temporary storage and could disappear. We move them to permanent, encrypted, backed-up storage before anyone uploads something real.

E. Screen-by-screen walkthrough with your team

Weeks 2-3

Two working sessions, about 90 minutes each. We go through every screen in both apps together and decide what to keep, what to cut, and what to combine. You come out with a written list of those decisions.

F. The One App design

Weeks 3-5

A clickable mockup of the simplified app. You can click through it like the real thing. It shows:

- what a family sees the moment they log in,
- what the AMG team sees,
- what an outside partner sees,
- one login and one look for all three.

Includes two rounds of changes based on your feedback.

G. The plan and a fixed price for the full build

Week 5

A written schedule and a fixed price for building the One App (Phase 2), based on what we found. You decide whether to continue. There is no obligation to go further.

- Building the combined One App. That is Phase 2, quoted separately at the end of this phase.
- New features, new screens, or new outside services beyond what's listed above.
- Onboarding real families or AMG staff onto the system.
- Outside service costs, listed in section 6.

What we need from AMG

- **Access** to both apps, the hosting account, and the connected services, within 3 business days of signing. A short checklist will be provided.
- **A handover call** with whoever built the current apps, if they can be reached.
- **One point person** who can answer questions and make day-to-day calls.
- **Two working sessions** with the people who will actually use the app.
- **Confirmation** that the names, emails, phone numbers, and documents currently in the apps are sample data and safe to remove.
- **Feedback within 3 business days** on anything we send for review. Delays on either side move the schedule by the same amount.

Fee and payment

PAYMENT	WHEN	AMOUNT
Deposit	On signing. Work starts when it is received.	\$7,500
Final	When the One App design (F) and the Phase 2 plan (G) are delivered	\$7,500
Total		\$15,000

Invoices are due within 10 days. If AMG moves forward to Phase 2 within 30 days of this phase ending, the Phase 2 price is set as part of that proposal and nothing in this phase is billed twice.

Outside costs

The apps rely on services AMG pays for directly: web hosting, the AI writing service, text messaging, and file storage. We expect these to run roughly \$150 to \$550 a month at today's usage. Wherever possible these stay in AMG's name and on AMG's card. Anything AOM pays on AMG's behalf is billed at cost, with no markup, and only with AMG's approval.

Who owns what

The short version: AMG owns the apps, the code, the data, the accounts, and everything AOM makes for AMG. AOM is hired to do the work, not to own any part of it. This section spells out exactly what that means, so there is nothing to interpret later.

WHAT	WHO OWNS IT	STARTING WHEN
The existing Portal and OS apps: code, designs, content	AMG	Always. Nothing in this agreement changes that.
All family, staff, and partner information, and every vault file	AMG	Always.
Every account the apps run on: hosting, code repository, web addresses, email, text, AI, and storage services	AMG, in AMG's name	Always. AOM is added as a user. AOM is never the owner.
Everything AOM makes: code changes, fixes, the One App design and mockup, the plan, all documents	AMG	As it is paid for. Each paid invoice transfers the work it covers, permanently.
AOM's general know-how and generic tools that were not made for AMG	AOM	AMG gets a permanent, free license to any of it built into the apps (point 5).
Outside and open-source software the apps use	Its makers	Used under its own license. Listed for AMG (point 6).

- The apps and the data are AMG's.** AOM's access exists only to do the work in this agreement. "Taking the keys" means we look after the apps; it does not mean we hold them. AOM will never claim ownership of the apps, the data, or the accounts, and will never withhold them, switch them off, or lock AMG out, including during a billing disagreement.

Who owns what

continued

- 2 **Accounts stay in AMG's name.** On every account, AMG is the owner and an AMG person holds the top-level login. If any account today sits in a former developer's name or a personal email, moving it into AMG's name is part of week 1 (item A). AOM will not open an account for the apps in its own name without AMG's written OK. If that ever happens, AOM moves it to AMG on request, at no charge.
- 3 **The code lives with AMG.** The source code, with its full history, is kept in a code repository owned by AMG's account from day one. AMG can see it at any time, and does not need AOM's permission to access, copy, or move it.
- 4 **Rights transfer in writing.** When AMG pays for work, AOM transfers (assigns) to AMG all rights to that work, including copyright. AOM makes sure anyone who works on the project for AOM, staff or contractor, has signed their rights over, so nothing is left with a third party. AOM will sign any further paperwork AMG reasonably needs to confirm its ownership, at no charge.
- 5 **What AOM keeps.** AOM keeps its general skills and know-how, and generic tools, code, and templates that were not made for AMG and contain nothing of AMG's. AOM will not reuse AMG's designs, content, data, or confidential information for anyone else. If any AOM tool made before this project ends up inside the apps, AOM will list it in writing, and AMG gets a permanent, free, irrevocable license to use, change, and keep using it, including with another developer.
- 6 **Outside and open-source software.** Every outside or open-source component the apps rely on is listed in the handover notes with its license. AOM will not add a component that would force AMG to publish its code or pay new ongoing fees without AMG's written approval.
- 7 **AI tools.** AOM may use AI tools to help write code and documents. Anything they produce for AMG belongs to AMG like everything else. Family, staff, and partner information is never used to train AI models, and is only processed by services set up not to train on it.
- 8 **No lock-in.** AMG can bring in another developer or take the work in-house at any time. There is no fee to get AMG's code, data, accounts, or passwords back.
- 9 **Handover.** Within 5 business days of this agreement ending, or of AMG asking, AOM delivers: all code, every password moved into AMG's password manager, the account list, and plain notes on how everything is set up. AOM then removes its own access if AMG wants, deletes any copies of AMG information it holds, and confirms that in writing.

Who owns what

continued

- 10 No showcasing without permission.** AOM will not name AMG, show the apps, or use screenshots in its portfolio or marketing without AMG's written permission.
- 11 This carries forward.** These terms apply to every later phase and to the Care Plan, unless both sides agree to something different in a signed document. If anything elsewhere in this agreement seems to conflict with this section, this section wins.

Ground rules

- 1 Ownership.** AMG owns the apps, the data, the accounts, and everything AOM makes for AMG. The full terms are in section 7.
- 2 Confidentiality.** Anything we see about AMG, its families, its partners, or its pricing stays private. It is used only for this project and not shared, during the project or after.
- 3 Access handled carefully.** We only ask for the access we need. Passwords are kept in a secure password manager, never in email. When the engagement ends, all access is handed back.
- 4 Inherited work.** The existing apps were built by others. We'll fix what's listed here and flag anything else we find. We aren't responsible for problems we didn't create, or for problems outside this list, unless we agree in writing to take them on.
- 5 Changes.** If AMG wants something not listed here, we'll describe it and price it in writing before doing it. Nothing extra gets billed without a written yes.
- 6 Not a security service.** The software helps AMG's team spot and organize risks. It does not replace AMG's professional judgment or the partners who provide protection. AOM is not responsible for decisions made using the app's information.
- 7 Liability.** AOM's total responsibility under this agreement is capped at the fees AMG has paid under it.
- 8 Walking away.** Either side can end this agreement with 10 days' written notice. AMG pays for work done up to that point, receives everything completed so far, and owns it as set out in section 7. The handover in section 7 applies.
- 9 Governing law.** This agreement is governed by the laws of the State of Arizona.

Signatures

By signing, both parties agree to the scope, fee, ownership terms, and ground rules above. Agreement No. AOM-AMG-2026-09.
